

We are looking for you ...

Backend developer (f/m/d) for our team in Hamburg!

UNIBERG is a modern and innovative consulting and software development company with outstanding IT expertise in carrier-grade IP and VoIP networks. We are continuously expanding our web-based application services for internet service providers. A strong foundation for all our application services is state-of-the-art open source software and an agile development process.

For our developer team in Hamburg St. Pauli, we are looking for a full-time backend developer (f/m/d).

Our software projects

- Software Platform for near real-time monitoring and data analysis software for ISP networks
- Software Platform for near real-time monitoring, data analysis, quality of service and troubleshooting of VoIP platforms

Your tasks

- Development of microservices for our highly scalable software platforms in agile SCRUM teams
- Integration of new services into our highly available software platforms
- Communication and cooperation in our distributed, partly English-speaking teams

Your profile

- Very good knowledge in a programming language like Python or Go
- Optional: Docker, Elastic Stack, Kafka, Redis, Linux, Shell, Git, JavaScript, HTML, CSS
- Basic knowledge of IP networks desired
- Good knowledge of English. Optional: Knowledge of German
- Curiosity about new technologies & motivation to lead projects to success in our team
- Degree in computer science or in a comparable field of study

What we offer

- Further training opportunities such as attending conferences, training courses and certifications
- Notebook & cell phone
- Good pay & company pension scheme
- Ambitious and familiar working environment with flat hierarchies
- Modern office with table soccer and the possibility to work remotely from home
- Free soft drinks and coffee

We are looking forward to your application, we are looking forward to you!
